THE HEAVYWEIGHT CHAMPIONSHIP NEWS LIVE FROM DONHAD

"WE'LL REDUCE YOUR COSTS TO RUBBLE"

NY TIMES

ROUND FOUR

Setting new records in safety

32 weeks free of LTIs or MTIs

Here at Donhad, we can't think of anything more important than the safety of our people. That's why we're always looking for ways to make Donhad a safer, more comfortable place to work. As part of this commitment, 15 months ago Donhad implemented the DuPont behavioural safety process.

This program required a commitment across all levels of staff to make changes to general behaviour with a view to improving overall safety.

Over the last 12 months, we're proud to report that we were Loss Time Injury Free (LTI Free), while Medical Treated Injuries (MTI) decreased from ten to four; six less than the same period last year. These results represent Donhad's best performance in the last decade. In addition, Donhad recorded a 32-week injury free period (no LTIs or MTIs) within the past year – the longest injury free period in Donhad's history.

We have also undertaken a Safety Guarding Project, designed to remove the need for interaction between people and plant equipment. The project design is complete and its execution is underway. Costing around \$700k, the project is further evidence of Donhad's commitment to safety.

New products release boasts 8% reduction in wear consumption

A determination to continually evolve and improve our products has placed Donhad at the cutting edge of technological innovation within the industry.

By constantly developing new products across the Donhad range of grinding media, our clients can rest assured that Donhad grinding media products represent the very best available technology in Australasia, providing greater wear resistance to reduce consumption and cost.

We are currently releasing five new product lines in both grinding and SAG applications to Newcrest and Xstrata to improve wear consumption by as much as 8%, consequently reducing operating costs.

In collaboration with our worldwide partners Molycop, our ongoing Research and Development programs ensure our latest leading edge grinding media products can cut your media consumption costs by between 5 - 10%. Talk to your regional sales manager now about what opportunities exist for your company to take advantage of our new products and reduce costs.

Molycop XI mineral processing symposium

Osorno - Chile November 26-28 2009

Here at Donhad, we're committed to providing you with the absolute latest in innovative technology from across the globe. Last month, this commitment saw us travel to Chile for the MOLYCOP Chile Mineral Processing Symposium! This gave us the chance to speak directly with members of MOLYCOP's Mineral Processing team as well as industry experts from around the world, who all shared their knowledge of the latest industry breakthroughs in the area of mineral processing.

What got us most excited was the *MOLYCOP Tools software version 3* which MOLYCOP and DONHAD will offer to the mineral processing market in Australia in the near future. This software will allow for even more detailed modeling of mineral processing circuits and delivers predicted media consumption rates for SAG/ball mills, mill charge trajectories, media trial analysis by statistical tools, theoretical mill throughput calculation and others.

We also discussed how valuable metallurgical analysis (that can be completed with the aid of *MOLYCOP Tools*) can lead to significant improvements in mill throughput, grinding efficiency and more.

Now back on Aussie soil, we are already hard at work ensuring that our customers have access to the absolute latest technology in 2010 and beyond. To help this happen, we've recruited an Applications Engineer to work more closely with you on trials and essentially improve the Donhad service offering. Here's to another big year at Donhad!

New faces of Donhad

Donhad would like to take this opportunity to warmly welcome a couple of new staff members who have come on board in the last few months.

Mark Butterfield has been appointed to National Sales and Marketing Manager.

A new Sales Process Engineer, Mirelle Tjong, has come on board to help continue Donhad's commitment to providing technical expertise to all of their customers.

We are also pleased to announce the hiring of Andy Bennett as the new Western Region sales manager to help us provide a greater level of customer service.

We look forward to building strong relationships with our talented new additions as we power full steam ahead into 2010.
